

GALVANIC REJUVENATE

Galvanic is a two-step treatment that works synergistically with positive and negative charged ions to propel similarly charged, high-potency actives deeper into the skin. Minimising the symptoms of ageing brought on by stress and tiredness – fine lines, dullness, photo-ageing, sensitivity and blemishes. Step 1 - combines negatively charge ions and actives, resulting in them repelling one another, causing them to force out impurities and deep cleanse the skin. Step 2 - both positive and negative ions are applied to the skin to stimulate and redistribute the skin's natural energy, instantly rejuvenating.
